***Abstract*—[Abstract placeholder.]**

I. Introduction

[Introduction placeholder.]

II. Models and Methods

A. Data preprocessing

[Preprocessing placeholder.]

B. Models

[Models placeholder.]

C. Validation protocol

[Validation placeholder.]

III. Results

Table I
Cross-validated performance of baselines and our model (mean $\pm$ std over K folds).

Model	F1	Accuracy
Always -1	0.000	0.912
Least squares	–	–
Ridge regression	–	–
Logistic regression	–	–
Reg. logistic regression	–	–
Ours (final)	–	–

Table II
Ablation study: effect of each component on CV F1.

Configuration	F1
Final model	–
– threshold tuning (use 0.5)	–
– missing indicators	–
– special-code cleaning	–
– one-hot encoding	–

[Results placeholder. AIcrowd test F1: –, accuracy: –.]

IV. Discussion

[Discussion placeholder.]

V. Summary

[Summary placeholder.]
